UNESTABLISHED BACK BULB CUTTINGS OF OUR FAVORITE HYBRID

= 1956=

While I have had many, MANY nice letters from you folks about the back bulbs I shipped to you, some added a slightly wistful note to the effect:

"The only thing that would have made it PERFECT would be if you had included a bulb of BLC MARION RYERSON, but I guess that would be expensive."

I haven't offered any back bulbs of this hybrid because I was busy building up a nice stock of the plants, which bring all the way from fifteen to one hundred and fifty dollars each, when I do decide to part with one. Even now, I've no intention of offering the cuttings at the six for ten dollars rate.

But I do have approximately one hundred of BLC MARION RYERSON cuttings, (each with good live eye) that I've decided to sell because we are so far behind in our potting schedule.

Please note: No two cuttings are from the same plant and no two M. RYERSON plants produce identical blooms: They run all the way from nearly White-Colored Lip to very dark; from "Brasso" type with extra large, frilly lips to stronger Laeliocattleya influence with lip well formed but not so full.

When visitors see a number of <u>BLC MARION RYERSONS</u> in bloom at the same time, they invariably marvel at the wide differences between them and have difficulty believing all came from the same seed pod. Until I point out that in the background of this complicated hybrid are five distinct species and fourteen hybrids! The possible combinations of chromosomes are practically limitless!

ORDER NOW IF YOU WANT ONE OR MORE OF THESE CUTTINGS. First orders will be honored first, and when the one hundred are gone there will be no more for about 2 years.

If you want a variety in shape and colors, order three or six. All will be good but no two will bloom alike.

Osmunda, stakes, pins included.) (SEE PAGE 10 and PAGE J. in your folder for potting instructions.)

ESTABLISHED DIVISIONS OF C. MOSSIAE, WAGNERII

Another item that Orchidists are forever seeking is the scarce and rare PURE WHITE Cattleya species plants, such as CATTLEYA MOSSIAE, WAGNERII.

I now have a limited number of established back divisions of this popular species, all with at least one new lead well started. These are in 5 or $5\frac{1}{2}$ -inch pots.
